LGT

Evelyn Kaumba (Kenyan)

AMP HEALTH

Host organization: AMP Health

Fellow position: M&E Manager

Fellowship duration: June 2022 – June 2023

Degree: Monitoring and Evaluation

Professional experience: 13 years

Summary :
Actively supported AMP health with designing M&E tools and data collection across 15 African countries. Ensuring feedback dissemination and programming being guided by evidence from data is such a great fulfilment to this role that I highly regard.

The problem AMP Health aims to tackle

- Health systems do not function optimally where the teams running them lack strong leadership and management capabilities to put policies and structures in place; thereby impeding delivery of quality care and response to changing circumstances.

The solution AMP Health provides…

- Improve health systems and outcomes by collaborating with governments to strengthen leadership and management capabilities through public-private partnership.

… contributing to the SDGs:

3 GOOD HEALTH AND WELL-BEING

17 PARTNERSHIPS FOR THE GOALS

Opportunity for a Fellow

- Continued growth of AMP into new Africa Countries will mean the team would need support.

- AMP Health is thinking on the idea of expanding beyond health to sectors such as Education, Agriculture which poses a great opportunity for a fellow.

- Increasing work in general and especially in Francophone countries poses a gap that may need a fellow who is French speaking.

"My experience as a Fellow…

I enjoyed my work with AMP health. Working with a team that is so dedicated to career and self improvement is such a privilege. One of the improvements that stands out for me is the enhancement of my soft skills (ability to listen, speak with confidence and coach my peers). This is all thanks to AMP Health."

- Evelyn Kaumba

Evelyn Kaumba's achievements…

- Data: Supported over 15 country teams with data collection effectively
- Continuously undertaking data analysis to synthesize data to inform decisions at various levels in the organization
- Reporting: Supported in the development of MEL report and annual report informed by data
- Feedback mechanism to teams: Closing the MEL feedback loop with all country teams. All teams are now receiving feedback from the data to guide their programs/plans
- Facilitated qualitative data collection from the French teams (Congo, central African republic, Togo, Chad, Mali and Mauritania)
- Actively supporting with ideas to help review the AMP Health strategic plan based on the current developments in the organization

… contributing to AMP Health

- New Country teams brought on board (A total of 15 teams currently with at least 5 new management partners)
- MEL tools standardized with data collection timelines being adhered to
- MEL process optimized. Closed feedback loop
- Successfully onboarded the current LGT Impact Fellow to the organization

Evelyn Kaumba's next challenge

I will still be supporting AMP Health in the M&E capacity after the end of the fellowship.
